*"Redefining Seed Potato Standards"*

### *Saskatchewan Elite Farm*

In one of the most isolated seed producing areas in North America, this farm focuses on producing high generation seed potatoes. With long crop rotations and every acre irrigated, the farm supplies growers with virus-free, early generation seed potatoes.

# **SSPGA MANDATE**

---

---

To promote the use of high quality production techniques by industry members.

- ◆ to inform grower/members and industry stakeholders of issues of importance to the industry and to provide, where possible, educational programs for new growers.
- ◆ to promote the use of high quality, locally produced, early generation seed by Saskatchewan's commercial potato industry.
- ◆ to foster the development of export markets for Saskatchewan grown seed potatoes.
- ◆ to keep grower/members and other stakeholders informed on seed potato regulation issues.
- ◆ to represent Saskatchewan seed growers' interests in the areas of federal and provincial policy and program development and in regulatory issues.
- ◆ to co-operate fully with federal and provincial efforts towards eradication of Bacterial Ring Rot and the control of other pests and pathogens of potatoes.
- ◆ to promote and support industry research and development.

## Proud to Support our Community!

With the donation of these three prizes worth approximately \$25 000, community groups that approached us were able to sell tickets for \$5.00 each with 100% being returned to their group. So with a \$25 000 donation our communities were able to generate approximately \$64 000 in 2013. Thank you to our 2014 partner the Elrose Lions.

**WHAT IS IT?**

**WHAT DOES IT MEAN FOR YOU?**

## **The Northern Environment**

- ⇒ **Long warm days**
- ⇒ **Short cool nights**
- ⇒ **Timely rainfall or Irrigation**

- ⇒ **Bright sunshine**
- ⇒ **Low humidity**
- ⇒ **Short growing season**

# RESULT

©registered trade mark of Saskatchewan Seed Potato Growers Association, Inc. (SSPGA)

## The Seed

- ◆ no premature sprouting
- ◆ good size distribution
- ◆ reduced moisture loss in storage
- ◆ increased tolerance of cold, wet soils

## The Plants

- ◆ greater leaf area
- ◆ increased canopy vigor means:
  - slower dieback
  - improved recovery from hail, frost, or insect damage

## The Crop

- ◆ **increased yields** especially in:
  - long season varieties
  - high stress environments
- ◆ **increased average tuber size**
  - more bonus size
- ◆ **no sacrifice in quality**

## The Bottom Line

- \$ **consistent performance**
- \$ **better returns**
- \$ **superior quality**

# Protect your investment accurately and efficiently

## ***Benefits of Aerial Application...***

- Ability to apply crop protection products in a timely and efficient manner
- More economical coverage of large areas
- Can treat crops faster than ground machines, which is critical for disease/pest control
- Not limited by wet soil conditions when ground machines can't operate
- No crop damage and losses from tire tracks, compaction, etc.
- Does not spread fungal spores

# **BENEFITS OF BUYING SASKATCHEWAN SEED POTATOES**

- ◆ Seed produced in Saskatchewan originated with pathogen-free nuclear stock.
- ◆ Samples of all Saskatchewan seed for sale are post-harvest tested in the laboratory for Bacterial Ring Rot.
- ◆ Saskatchewan seed potatoes are produced under an abbreviated generation system. Elite III seed has become the main class of seed produced for commercial potato production--from nuclear to commercial planting in four years.

# CANADIAN CERTIFICATION PROGRAM

Seed potato certification in Canada is a national program which is administered and implemented by the Canadian Food Inspection Agency (CFIA) branch of Agriculture and Agri-Food Canada.

The regulatory authority of the certification of seed potatoes is contained under Part II of the **Seeds Regulations** (Registered SOR/2002-198, May 23, 2002).

Canada's seed potato certification program is designed to regulate the variety, purity and health of seed stocks. You should know:

- ① **Disease-Free Nuclear Seed:** All seed potatoes produced in Canada originate with nuclear stocks which are produced under sterile conditions from tissue culture that has been subjected to laboratory tests and found free of disease pathogens.
- ② **Limited Generation:** Seed potatoes produced can remain in the certification program for no more than seven years. The first field generation is Pre-elite, which is produced from nuclear stock. Sequentially, the seed annually moves downward through the classification system. This results in a "flush-through" system which minimizes the risk of disease build-up.

The seed classes from the highest to the lowest are as follows:

- a) **Nuclear** - produced from potato tissue culture material which has been tested in the laboratory and found to be free of all disease pathogens;
- b) **Pre-elite** - produced from nuclear stock;
- c) **Elite I** - produced from nuclear stock or Pre-elite seed;
- d) **Elite II** - produced from nuclear stock or any of the previous classes;
- e) **Elite III** - produced from nuclear stock or any of the previous classes;
- f) **Elite IV** - produced from nuclear stock or any of the previous classes;
- g) **Foundation** - produced from nuclear stock or any of the previous classes;

h) **Certified** - produced from nuclear stock or any of the previous classes;

- ③ **Disease and Variety Purity Standards:** Disease freedom and variety purity are maintained through a program consisting of multiple field inspections, laboratory testing, post-harvest testing and sound agronomic practices.

The Pre-Elite, Elite I, II, III, IV, Foundation and Certified classes of seed must undergo and pass two field inspections. All field inspections are made during a time most opportune for the visual detection of disease symptoms and foreign varieties in the growing plant.

The standards for certification of all classes of seed are set out in sections 47.1.1 - 47.8 of the **Seeds Regulations**. The maximum levels (%) of detectable disease on the final inspection for the main commercial classes are summarized below:

Disease	Elite III	Elite IV	Foundation	Certified
Bacterial Ring Rot	0	0	0	0
Potato Spindle Tuber Viroid	0	0	0	0
Total all Viruses	0.2	0.3	0.5	2
Total of blackleg, wilts and viruses	0.3	0.5	1	2
Varietal Mixes	0.05	0.1	0.2	0.5

**Note:** Inspection for the purpose of certification is made either visually or through laboratory testing of samples, or both. Certification does not constitute a warranty by either the Canadian Food Inspection Agency or the grower that the seed potatoes meet the applicable standards set out in sections 47.1.1 - 47.8 of the **Seeds Regulations**.

# SEED IDENTIFICATION

Bagged seed is still available and carries the following Canadian Food Inspection Agency tags:

- ORANGE** tags identify Elite seed
- WHITE** tags identify Foundation seed
- BLUE** tags identify Certified seed

All shipments of nuclear seed must be accompanied by a Nuclear Stock Certificate issued by the Canadian Food Inspection Agency.

Bulk seed sales are identified by Bulk Movement Certificates which are also issued by the Canadian Food Inspection Agency.

To be valid, the tags and Bulk Movement Certificates must identify the seed by variety, class and certification number.

# **PROCEDURES TO CONTROL BACTERIAL RING ROT**

---

Every effort is made to prevent contamination of seed stocks by ring rot bacteria. The following mechanisms each contribute to the reduction of the risk of Bacterial Ring Rot:

- ① Maintenance of pedigree records on all seed lots certified by the Canadian Food Inspection Agency. Records are maintained from generation to generation on all seed stocks produced in the province.
- ② All seed potatoes produced originate from disease free nuclear stocks.
- ③ Limited field generation production system (flush-through production).
- ④ Inspections of the growing crop for Bacterial Ring Rot.
- ⑤ Tuber inspections at harvest or in the bin shortly after harvest.
- ⑥ Frequent tuber inspections at shipping point.
- ⑦ Seed trace backs on Bacterial Ring Rot occurrences in commercial potato production.
- ⑧ Laboratory testing of all seed lots for the presence of Bacterial Ring Rot.
- ⑨ Total rejection of all seed produced on a farm where a seed lot is determined to be infected with Bacterial Ring Rot.
- ⑩ Seed grower diligence in preventing Bacterial Ring Rot introduction, which includes disinfecting all equipment and buildings involved in the harvesting, handling and storage of seed potatoes.

# **POST-HARVEST TESTING**

At least 400 randomly selected tubers from each qualifying seed potato lot are collected and sent for post-harvest testing.

The main emphasis of the post-harvest test is the detection of viral infections which may have occurred during the previous growing season through transmission by insects or farm machinery. When infections of this type occur the plants may remain symptomless; however, pathogens can be carried over in the seed tuber to the next season. The post-harvest test attempts to identify where and to what extent these infections have occurred.

The main diseases for which readings are taken include:

- Potato Leafroll Virus;
- Mosaic Virus;

Test results may be obtained from individual growers.

# TUBER QUALITY STANDARDS

All seed potato classes are subject to the same tuber standards--there is only one quality grade for Canada Seed Potatoes. The total allowable disease and defects permitted in a graded seed potato lot are set out in section 48.1, subsections (2) - (10) of the **Seeds Regulations**. The following is a summary of the shipping point tolerances:

Disease or Defect	Tolerance Level (%)
Soft rot or wet breakdowns	0.1
Dry rot	1
Scab or Rhizoctonia - light	10
Scab or Rhizoctonia - moderate	5
Stem-end discolouration due to top-killing, frost, heat, or drought with penetration from 6 - 13 mm	4
Tubers malformed or externally damaged	2
Total number of tubers affected by disease and defects, not including slight scab and rhizoctonia and stem-end discolouration	5

In addition there should be no more than the following levels of foreign varieties: not more than 0.05% in Elite III, not more than 0.10% in Elite IV, and not more than 0.20% in the Foundation and 0.50% in the Certified classes of seed.

# **NOTICE TO BUYER**

## **LIMITED WARRANTY LIMITATION OF DAMAGES AND REMEDY**

The seller warrants that any seed potatoes sold or agreed to be sold to the buyer by the seller are of the grade specified upon the tag attached to each container thereof, as required by Statute, within recognized tolerances. The Inspection Certificate(s) of the Canadian Food Inspection Agency (unless superseded) shall be conclusive evidence of the purity, quality, grade or any other matter respecting such seed potatoes, and such Certificate(s) shall be binding upon the buyer and the seller. It is expressly agreed that no other warranties, conditions or representations, expressed or implied, statutory or otherwise, of merchantability, fitness for a particular purpose, productiveness, absence of disease, or otherwise, are made by the seller.

A request for re-inspection of a lot may be made within two working days after receipt of the lot, and the re-inspection shall be carried out by an inspector as soon as possible but no later than five days after receipt of the request.

## **ACREAGE LISTING BY VARIETY**

**SECTION 1: NUCLEAR**

**SECTION 2: PRE ELITE to ELITE 1**

**SECTION 3: ELITE 2 TO ELITE 4**

**SECTION 4: PRIVATE VARIETIES**

Seed at the four commercial seed classes (Elite III, Elite IV, Foundation, and Certified) are offered for sale to the commercial potato producer. The higher classes are available for other seed potato producers.

All potato stocks in the following list are available for sale as seed. They have received the required field inspections and have been found to be within the tolerance levels for disease and foreign varieties.

Luna  
TRANQUILITY™

fig. 16

# Protato

[prə-tā-tō]

**1. Noun:** A potato plant that has been proactively treated with new Luna Tranquility™ fungicide for unparalleled protection against many devastating diseases. As a powerful broad-spectrum fungicide with unique Group 7 (flupyram) and proven Group 9 (pyrimethanil) modes of action, Luna Tranquility defends your potato crop with its preventative and systemic properties for control of early blight, brown spot, white mold and protection against black dot.

**2. Usage:** “I know when I apply Luna Tranquility that my **protato** crop’s really protected.”
